**EXAMINER'S AMENDMENT** 

An examiner's amendment to the record appears below. Should the changes and/or

additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR

1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the

payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with

Paul Bobowiec on 11/29/2005.

The application has been amended as follows:

In the claims:

Claim 27: Cancelled

Claim 28: Cancelled

REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

Referring to claims 1 and 17: Beside the reason for allowance was previously indicated

in the office action dated 07/22/2005, the below reason for allowance, in light of the applicant's

arguments, further explains the distinct between the claimed invention and the cited prior art.

If the printer driving power supply controlling unit is the same as Choo et al.'s

element 210 (FIG. 2) or as Majid et al.'s CONTROLLER IC (FIG. 2) (as previously cited by the

examiner), these element and controller do not generate and transmit the power-off control signal

to the printer driving power supply or to the power-off signal detection driving unit so as to turn

off the printer driving power supply as cited in the claims; If the printer driving power supply

controlling unit is the same as Choo et al.'s SYSTEM CONTROLLER 230 (FIG. 2), this

controller does not receive any signal considered as the switch-on signal generated in accordance to the on-state of the switch as cited in the claims.

As a result, the primary reasons for the indication of the allowability of the claims is the inclusions therein, in combination as currently claimed, of the limitation that the driving power supply controlling unit receives the transmitted switch-on signal, then generates and transmits the power-off signal to turn off the printer driving power supply is neither disclosed nor taught by the cited prior art of record, alone or in combination.

Referring to claim 29: The primary reasons for the indication of the allowability of the claim is the inclusions therein, in combination as currently claimed, of the limitation that the controller (230) generates the power on control signal in response to a predetermined printing command, if the PWM control signal is not currently being output to the electronic switch and generates the power off signal in response to an operation of the user operable switch, if the PWM control signal is currently being output to the electronic switch is neither disclosed nor taught by the cited prior art of record, alone or in combination.

Claims 2-16, 18-26, and 30 are allowed because they depend directly/indirectly on claim 1, 17, or 29.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
